Subject: FS: Couple of electronics books...

Hello all,

Boy the list has been quiet! Hope there's someone there to read this!

I make a point to hound the bookstores looking for books on our topic to rescue from oblivion, passing them on for what they cost (plus postage). I'm not out to make money on these.

Here's my latest:

1. Radio Operators License Q&A

6th Edition January 1964 715 pages plus supplements in back. With original dust jacket. Very good shape. I paid the pencil written price of \$7.10 which is exactly the same as the original sale price! Let's just call it \$7 even.

2. Essentials of Electricity and Electronics

Third edition - text book - from 1965 gazillions of formulas and theoretical discussions of general electronics and such. \$6

3. Mathematics for Electronics

Addison Wesley publishing - text book Also has gazillions of formulas. Also has discussions on tube formulas as well as transistors and the usual stuff. \$6

If you have any interest at all in these, let me know. Otherwise they'll go in my ever-expanding electronics library.

Take care all,

73's

**Subject:** Dayton, OH BA Haunt

BAers/MilCom

Those of you familiar with Mendelson Electronics Co. in Dayton, OH will laugh when I say I had an hour to kill before a flight and I went to Mendelsons. This place is huge and full of every component a person that works with this old gear could ever want. It would take the better part of a week to just see everything once.

They have very little test gear, no complete radio gear that I saw, but if you ever needed a strange connector, resistor, transformer, tube, tube testers, power supplies, wire, gears, cylinders, pots or whatever I bet they have it. Finding it will be the challenge, but their sales folks seem to have a good grasp of where something should be and sometimes will know if they have it or not.

I met Edward App and he was very knowledgable and helpful. They have catalogs, web site, e-mail, 800 number and fax, so there is no reason you cannot communicate with this place. I strongly recommend a visit to Mendelsons, even if you just have an hour, just so you will know where they are located for your next two week vacation. :-)

Mendelson Electronics Co., Inc.  
340 East First Street  
Dayton, OH 45402  
513/461-3525  
800/422-3525  
fax 513/461-3391  
e-mail: meci@meci.com  
<http://www.meci.com>

Catalog #104 is their latest, however it only scratches the surface of their inventory. Call the 800 number and request the catalog.

Good hunting and 73s
